### IPCC Special report on Oceans on Cryosphere

The Intergovernmental Panel on Climate Change (IPCC) released the *Special Report on the Ocean and Cryosphere in a Changing Climate*. Reporting on the state of the world's oceans, together with high mountain snowy regions and polar regions (known as the cryosphere). Unless humanity responds quickly and deeply there will be unprecedented impacts including sea level rise, changing behavior and migration patterns for marine life, stronger and more frequent tropical storms, flooding, food insecurity, and impaired water quality. "Simply put, the global ocean is responsible for 97% of all water on planet Earth. We have a moral responsibility to do everything in our power to safeguard this vast and magnificent, yet limited, gift of God's creation." (Creation Justice Ministries, 2019-09-25) The entire document (1,170 pages) is available here.
